

Antigravity — IDE Scratch Origin

Dev environment lineage · 2026-10-02

Executive framing

Antigravity is not a separate shippable Mens Mercatus product in /workspace. Documentation for Extrafazant Studio and Mens Mercatus Hub cites paths under Google Antigravity IDE scratch (/Users/katlego1759/.gemini/antigravity-ide/scratch/...). This brief clarifies lineage only.

System thesis

Treat Antigravity as the upstream IDE/dev environment where creative-suite artifacts were authored, then copied into portfolio and Lab trees. Readers should credit Extrafazant/Hub as products — not invent an 'Antigravity app' card.

WHAT IT IS

IDE / scratch environment
Gemini Antigravity paths
Authoring origin for suite
Not in /workspace as app
Cited in architecture md
Lineage documentation

WHAT SHIPPED

extrafazant-studio tree
mens_mercatus_hub tree
Portfolio apps symlink
server.js :3456 / :8088
Those are the products
Point cards there

WHAT NOT TO DO

No fake live Antigravity card
No claim Antigravity 'runs'
No invent metrics/uptime
No duplicate product page
Use this 2-page brief
Vault link OK (lineage)

Non-goals (explicit)

- Not a portfolio app to launch or demo as production.
- Not a claim that Antigravity IDE is Mens Mercatus IP to sell.
- Not a substitute for Extrafazant / Hub architecture briefs.

Schematic — IDE scratch → portfolio artifacts

IDE scratch → copy into repo → portfolio/Lab vault

What this means for readers

Lineage	Provenance of files from IDE scratch into Mens Mercatus repos.
Product boundary	Extrafazant/Hub are shippable surfaces; Antigravity is environment.
Path honesty	Absolute Mac scratch paths in docs are historical, not portable URLs.
Vault role	Store this brief so employers understand origin without mis-clicks.
No latency/evals	Environment lineage has no production SLOs.
Reader action	Open Extrafazant brief for the real creative architecture.

PORTFOLIO READING GUIDE

Antigravity = IDE scratch origin for Extrafazant/Hub — not a live Mens Mercatus app.
Do not add a Selected works card claiming Antigravity runs. Vault lineage entry is enough.
Pair with Extrafazant Studio skeleton brief for the actual product architecture.
